Abstract

A system for managing patent and trademark application data via the Internet, comprising matter, task, and security modules. The matter module is operable to manage data such as docketing data relating to patent matters, the tasks module is

5   operable to manage tasks related to each matter managed by the matter module, and the security module is operable to restrict access to task and matter data management to selected system users. The system is implemented in some embodiments as a World Wide Web site on the Internet, which in further embodiments comprises various components such as an application server, a Java server, and a database.
